Classesd Styles

Columns and Floats

column .

```
<WRAP column 30%>...content...</WRAP>
```

_____

, ,

.

```
//**__          __**//
```

.

```
//**            **//
```

,

.

```
**//No Headline//**
```

Normally you would only need the class column, but for more sophisticated uses (not only for columns, but for any other classes, like boxes and notes as well) you can have several kinds of "floats":

- **column** is the same as left in LTR languages and the same as right in RTL languages
- **left** will let you float your wrap on the left
- **right** will let the wrap float right
- **center** will position the wrap in the horizontal center of the page

You can set any valid widths (but only on divs): %, px, em, ex, pt, pc, cm, mm, in, but most of the time you'd only want either

type	e.g.	note
%	30%	makes sense in a liquid layout
px	420px	makes sense if your layout has a fixed pixel width or if your container contains images with a certain width
em	20em	makes sense if you like your wrap container to grow and shrink with the font size or if your layout is em-based

A **table** inside a column or box will always be **100% wide**. This makes positioning and sizing tables possible.

After using any of the float classes, you might come across something like this, where the following text protrudes into the space where only the floating containers should be …

… to prevent that, you should simply add

```
<WRAP clear></WRAP>
```

after your last column.

You **can** use the same options with spans (as each element that floats is automatically a block level

element), but it probably doesn't make too much sense. ❗ Widths on spans normally do not work (by design), but can make sense, when it is floating.

⚠️ Attention: Widths can cause problems and will often look different and break in some browsers. If you're not a web developer, you might not understand any problems regarding the box model. Just try to test your columns in all major browsers and make your widths smaller than you initially think they should be.

All of those options will also work in the boxes and notes wraps (see below).

For modern browsers (Firefox, Chrome and Safari) you can use multi-columns. Just use **col2** for 2 columns, **col3** for 3 columns, **col4** for 4 columns and **col5** for 5 columns.

⚠️ Note: Multi-columns don't make sense for spans.

You can use these different text alignments:

- leftalign
- rightalign
- centeralign
- justify

<div align="center">Center aligned text …</div>

<div align="right">… and right aligned.</div>

```
<WRAP centeralign>
Center aligned text ...
</WRAP>

<WRAP rightalign>
... and right aligned.
</WRAP>
```

⚠️ You cannot add alignments to spans.

round box 570px center

- box creates a box around the container and uses the colours from the

template's `style.ini` as default colours (`__background_alt__` and `__text__`)

- any of the classes `info`, `tip`, `important`, `alert`, `help`, `download`, `todo` will add a special note container with a corresponding icon
- the classes `danger`, `warning`, `caution`, `notice`, `safety` use safety colours (and no icons)
- `round` can be added to anything with a background colour or a border and will only work in modern browsers (no Internet Explorer)

Info

`<WRAP info></WRAP>`

Tip

`<WRAP tip></WRAP>`

Important

`<WRAP important></WRAP>`

Alert

`<WRAP alert></WRAP>`

Help

`<WRAP round help></WRAP>`

Download

`<WRAP download></WRAP>`

Todo

`<WRAP todo></WRAP>`

:

Danger

`<WRAP danger></WRAP>`

Warning

`<WRAP warning></WRAP>`

Caution

`<WRAP caution></WRAP>`

Notice

```
<WRAP round
notice></WRAP>
```

Safety

```
<WRAP round
safety></WRAP>
```

You can use notes and boxes also inside text with spans like this: info, help, alert, important, tip, download, todo and round box and danger, warning, caution, notice, safety.

```
<wrap info>info</wrap>, <wrap help>help</wrap>, ...
```

Marks

You can mark text as highlighted, less significant and **especially emphasised**.

```
You can mark text as <wrap hi>highlighted</wrap>, <wrap lo>less
significant</wrap> and <wrap em>especially emphasised</wrap>.
```

⚠ This might look ugly in some templates and should be adjusted accordingly.

This text will appear indented.

```
<wrap indent>This text will appear indented.</wrap>
```

This text will appear "outdented".

```
<wrap outdent>This text will appear "outdented".</wrap>
```

Prewrap

```
Inside this code block the
words will wrap to a new
line although they are all
in one line.
```

```
<WRAP prewrap 250px>
<code>
Inside this code block the words will wrap to a new line although they are
all in one line.
</code>
</WRAP>
```

Spoiler

> : <wrap spoiler>   .</wrap>

(   )   .
                              .

Hide

:

> : <wrap hide>John, please revise that sentence.</wrap>

⚠   : The text will still appear in the source code, in non-modern browsers and is searchable. Do not hide any security risky secrets with it!

Pagebreak

pagebreak   :

```
        pagebreak              : <WRAP pagebreak></WRAP>
```

Pagebreak   .
            .

Nopagebreak

          pagebreak   :

much content, belonging together (like a long table)

```
      pagebreak                    : <WRAP nopagebreak>much content, belonging
together (like a long table)</WRAP>
```

                                                    .   pagebreak
            .

Noprint

```
<wrap noprint>                                                                .</wrap>
```

Onlyprint

                                                                    .

```
<wrap onlyprint>                                                              .</wrap>
```

Typography

          typography   .
              .

  - font family: sansserif, serif, monospace
  - font size: bigger, muchbigger, smaller
  - font colour: fgred, fggreen, fgblue, fgcyan, fgviolet, fgyellow, fggrey, fgwhite,
    fgblack
  - background colour: bgred, bggreen, bgblue, bgcyan, bgviolet, bgyellow, bggrey,
    bgwhite, bgblack
      ,

                                  ,   .   .

//**__                    green
  __**//

<WRAP 165px left>
Inner nested box floats left and
is partly <wrap em
hi>__em__phasized and
__hi__ghlighted with nested <wrap
bigger>__bigger__ text</wrap>
inside</wrap>.
</WRAP>

Text inside outer right box, but
beneath inner left box.

<WRAP clear></WRAP>

<WRAP round tip>
Round tip box underneath, after a
''clear''.
</WRAP>

</WRAP>
```

<u>   **green**   </u>

Inner nested box floats left and is partly **emphasized and highlighted with nested bigger text inside**.

Text inside outer right box, but beneath inner left box.

Round tip box underneath, after a clear.

,

wrap   .

```
<WRAP :he>
זה עברית. ((<wrap :en>This means "This is Hebrew.", at least according to
[[http://translate.google.com/|Google Translate]].</wrap>))
</WRAP>
```

זה עברית.[1]

The text direction (rtl, right to left or ltr, left to right) will get inserted automatically and is solely dependent on the language. The list of currently supported languages is taken from: http://meta.wikimedia.org/wiki/Template:List_of_language_names_ordered_by_code (If you specify a language not listed there, it simply won't do anything.)

[1)]
This means "This is Hebrew.", at least according to Google Translate.
